

Table of Contents

1. Greenhouse: An Artificial House for Plants	1
1.1 A Brief About Greenhouse	1
1.2 Why Is Artificial House Needed For The Plants?	2
1.3 Origin and History of Greenhouse	5
1.4 Various Morden Greenhouse	8
1.5 Origin of Greenhouse in America	9
1.6 Greenhouses In The Present Time	9
1.7 Factors To Consider Before Building A Greenhouse	10
1.7.1 Season	10
1.7.2 Weather	11
1.7.3 Protection	12
1.7.4 Easily Customize the Greenhouse to Your Needs	12
1.7.5 Save Natural Resources	12

1.7.6	Photosynthesis	13
1.7.7	Pests and Predators	13
1.7.8	Exotic Plants	13
1.7.9	Location	14
1.7.10	Cost	15
1.7.11	Ventilation and Temperature	15
1.7.12	Pests and Disease	16
1.7.13	Pollination	17
1.8	Advantages of a Greenhouse	18
1.9	Disadvantages of a Greenhouse	19
1.10	Recent Updates Related to Greenhouse	20

2. Various Types of Greenhouse 23

2.1	Four Factors to Consider Before Building A Greenhouse	23
2.1.1	Optimum Carbon Dioxide Availability	24
2.1.2	Proper Ventilation	24
2.1.3	Light Availability	25
2.1.4	Temperature Regulation	26
2.2	Classification of Greenhouse Based on Shapes or Structures	26
2.2.1	Free-standing Greenhouses	26
2.2.2	Gutter Connected Greenhouse	35
2.2.3	Pit Greenhouse	38
2.3	Classification of Greenhouse Based on Materials	39
2.3.1	Wooden Frame Greenhouse	39
2.3.2	Pipe framed Greenhouse	40
2.3.3	Truss framed Greenhouse	41
2.4	Classification of Greenhouses Based on Covering Materials	42
2.4.1	Glass Greenhouse	42
2.4.2	Polycarbonate and Acrylic Greenhouses	43
2.4.3	Fiberglass Greenhouses	45
2.4.4	Film Plastic Greenhouse	46
2.5	Classification of Greenhouses Based on Technology and Budget	47
2.5.1	Low Technology Greenhouse	47
2.5.2	Medium Technology Greenhouse	48
2.5.3	High Technology Greenhouse	49

3. How to Go For Greenhouse Construction	51
3.1 Based on Location	51
3.1.1 Direction	51
3.1.2 Preferring Morning Sunlight Over Evening Sunlight	52
3.1.3 Winter/Summer Months	53
3.1.4 Electricity	53
3.1.5 Choose a Well-drained Area for your Construction	54
3.2 Based on Structure	55
3.2.1 Measurements	55
3.2.2 Help can get you Better and Faster in Constructing a Greenhouse	55
3.2.3 Design and Plan	56
3.2.4 Ceiling Frames	56
3.2.5 Pick a Rigid supporting Frame	57
3.3 Based on Covering Materials	58
3.3.1 BPA vs. BPA free and Durability	58
3.3.2 Use Transparent Material to Ensure Maximum Sunlight Penetration	59
3.3.3 Fiberglass vs. Glass	59
3.4 Boundary/Frame and Foundation Construction	59
3.5 Temperature Maintenance	60
3.6 Miscellaneous planning for the Greenhouse	61
3.6.1 Crop Research	61
3.6.2 Water Supply	61
3.6.3 Proper Temperature	62
3.6.4 Proper Drainage System	62
4. Requirements and Equipment For Greenhouse Development	63
4.1 How to Start With It?	64
4.1.1 Attached Greenhouse	64
4.1.2 Gutter Connected Greenhouse	65
4.1.3 Freestanding Greenhouse	66
4.1.4 Glazing Greenhouse	67
4.2 Various Greenhouse Requirements	68
4.2.1 Germination Space	68

4.2.2	Choice of Site	69
4.2.3	Right Piece of Land	70
4.2.4	Water Quality	71
4.2.5	Alignment	71
4.2.6	Physical Configuration and Features	71
4.2.7	Accessibility by Road	71
4.2.8	Basic Facilities	72
4.2.9	Rules and Regulations	72
4.2.10	Master Plan Layout	72
4.2.11	Parking Area	73
4.2.12	Warehouse	73
4.2.13	Plant Production Outdoors	73
4.3	Equipment Required in a Greenhouse	74
4.3.1	Environment Control Equipment	74
4.3.2	Additional Lighting	77
4.3.3	Control Equipment	78
4.3.4	Water System and Irrigation Equipment	79
4.3.5	Pest Control and Fertilizer storage	81
4.3.6	Energy Conservation Equipment	81
4.3.7	Greenhouse Furniture	82
4.3.8	Ventilation Equipment	83
4.3.9	Equipment for Carbon Dioxide Enrichment	85
4.3.10	Greenhouse Containers	85
4.3.11	Greenhouse Humidifiers	85
5.	A Brief About Greenhouse Operations	87
5.1	Greenhouse Operations Modes	88
5.1.1	Cooling	88
5.1.2	Heating/dehumidifying	88
5.1.3	Venting/dehumidifying	89
5.2	Regulating and Monitoring CO ₂ Levels	89
5.3	Monitoring Temperatures	90
5.3.1	Heating a Greenhouse During Cold Weather	91
5.3.2	Keeping a Greenhouse Cool During Hot Weather	94
5.4	Ventilating a Greenhouse	96
5.5	Regulating Light Levels	99

5.6	Humidity Control	100
5.6.1	Method 1- Proper Irrigation	102
5.6.2	Method 2- Installation of Drip Preventing the Lining	102
5.6.3	Method 3- Adequate and Proper Ventilation	103
5.6.4	Method 4- De-weeding and Shade Installation	104
5.7	Setting up an automated greenhouse control system	104
5.8	Planting Approaches	104
5.9	Animals and Pests	106
5.10	Maintenance	106
6.	Detailed Overview on Greenhouse Heating	108
6.1	Where are the Heating Systems Required?	110
6.2	How is heat lost from the Greenhouse?	111
6.2.1	Calculating the heat loss due to Conduction	112
6.2.2	Calculating the heat loss due to Leakage	113
6.2.3	The Wind Factor	113
6.2.4	Conduction	114
6.2.5	Convection	114
6.2.6	Radiation	115
6.3	Things to mind before fixing the Heating System	116
6.3.1	Types of Heating Systems	116
6.3.2	Cost-effective Methods	126
6.3.4	Circulation System	131
6.3.5	Ventilation System	132
6.4	The Heating System in the Beginning	132
6.5	Growth of the Greenhouse System in the Present	135
6.5.1	Greenhouse in a Warm Desert Climate	135
6.5.2	Greenhouse in the Arctic	135
6.5.3	Deep Winter Greenhouse	136
6.5.4	Northern Greenhouse	137
7.	Detailed Overview on Greenhouse Cooling	140
7.1	Principles Behind Greenhouse Cooling	141
7.1.1	Shading	141
7.1.2	Ventilation	146

7.1.3	Mechanical Ventilation	150
7.1.4	Evaporative Cooling	153

8. Environmental Control Systems Used in A Greenhouse 159

8.1	The Greenhouse Climate and Control Systems	159
8.2	An Overview of Environmental Systems	160
8.3	Issues with controlling the Surrounding Conditions	161
8.4	Innovations in the field of Greenhouse control systems and Technology	162
8.5	Working of the Greenhouse Sensor Systems	163
8.6	Better control with Greenhouse control systems	164
8.7	Importance of Environment Control In Greenhouse	166
8.7.1	Improving Plant Quality	167
8.7.2	Temperature Control	167
8.7.3	A Labor-Saving Tool	168

9. Nutrient Solution For Growth Media 169

9.1	The basic structure of Growing Media	169
9.2	Components	170
9.3	Physical Attributes Required by Growing Media	171
9.4	Chemical Attributes of Growing Media	172
9.5	Active Raw Materials	173
9.6	Cost Incurred in in-house production of growth media	173
9.7	A brief about Hydroponic Systems	174
9.7.1	Advantages of Hydroponic	174
9.7.2	Movement of high-density plants is easier as they grow.	174
9.7.3	Larger Output	174
9.7.4	Absorption of Less Quantity of water	175
9.7.5	Disadvantages of Hydroponics	175
9.7.6	The Huge Cost of setting	175
9.7.7	Skilled Workforce and Technical Knowledge	175
9.7.8	Electricity Expenses	175
9.8	Various Types of Plantation	175
9.8.1	Growth Patterns	175
9.8.2	Stone / Sand Style	176
9.8.3	Pipes and Troughs	176

9.8.4	Beds	177
9.8.5	Trays	177
9.8.6	System of Nutrient Film	178
9.8.7	Bags	179
9.8.8	Aeroponics	179
9.8.9	Various Other Materials	180
9.9	Artificial Inputs or Fertilizers for Crop Growth	180
9.9.1	Peat Moss and Similar Products	181
9.9.2	Wood Residue	184
9.9.3	Leaf Molds	185
9.9.4	Sawdust	186
9.9.5	Barks	187
9.9.6	Bagasse	188
9.9.7	Rice Hulls	188
9.9.8	Sand	189
9.9.9	Perlite	190
9.9.10	Vermiculite	191
9.9.11	Calcined Clay	191
9.9.12	Expanded Polystyrene	192
9.9.13	Urea Formaldehyde	193
9.10	The Methodology of making Soilless Growing Media	193
9.11	Growing Media Configurations	194
10.	What is Root Substrate and Pasteurization?	196
10.1	Pasteurization	196
10.1.1	Damping-off	197
10.1.2	Pasteurizing Medium	198
10.1.3	Using Sterilize Tools and Containers	199
10.1.4	Pre-sterilized Soilless Mix or Potting Soil Mix and Containers Used	199
10.2	Soil Pasteurization	200
10.3	Soil Preparation	201
10.4	Growing Mushrooms in Substrate	201
10.5	The Microbes	202

11. Technical Control of Nutrient Solutions	205
11.1 Classification of Nutrient Solution	206
11.1.1 Active Systems	206
11.1.2 Passive Systems	206
11.2 Basic Nutrient Solution Circulation Systems	206
11.2.1 The Ebbs and Flow (Flood & Drain)	206
11.2.2 Wicked System	207
11.2.3 Deep Water Culture System (DWC)	208
11.2.4 Nutrient Film Technique (NFT)	208
11.2.5 Drip System	209
11.2.6 Aeroponics	210
11.3 Advanced Hydroponics Systems	210
11.3.1 Kratky System	210
11.3.2 Fogponics	211
11.3.3 Dutch Bucket or Bato Bucket System	212
12. Greenhouse Irrigation System	213
12.1 Rules to follow while you plan to water your Greenhouse Plants	215
12.2 What are your watering options?	215
12.2.1 Watering Types and Systems	215
12.2.2 Automated Irrigation/Watering	219
12.3 Water Test and Quality checks	220
12.4 Performing Tests	221
12.4.1 Soluble Salt Test	221
12.4.2 Alkalinity	221
12.4.3 Hardness	221
12.5 TIPS for Successful Watering	222
13. Fertilization and Mineral Solutions Used in Greenhouse	224
13.1 Mineral Solutions/Nutrients	224
13.1.1 Active Absorption	225
13.1.2 Passive Absorption	225
13.1.3 Factors Affecting Mineral Nutrients Acquisition by Plants	226

13.1.4	Preparation of Nutrient Solution	231
13.2	Fertilization	233
13.2.1	Environmental and Greenhouse Conditions for Good Fertilization	234
14.	Role of Carbon Dioxide in Fertilization	235
14.1	Photosynthesis and Carbon Dioxide Level	235
14.2	Fertilization via Carbon Dioxide	237
14.3	Methods of Increasing Carbon Dioxide	238
14.4	Effects of increased CO ₂	239
14.5	Carbon Dioxide Origins	240
14.6	Liquid CO ₂ Fertilization	241
14.7	Additional application of CO ₂	243
14.8	Exchange of atmospheric air	244
14.9	Plant respiration or Photosynthesis	244
14.10	Volume of Burner	246
14.11	When is extra Carbon Dioxide Required?	246
14.12	Economical view of Additional CO ₂	247
14.13	Greenhouse dispersion of Carbon Dioxide	247
14.14	Social skills to Increase Production	248
14.15	Excessive addition of CO ₂ leading to Plant Deterioration	248
14.16	Effects of additional CO ₂ on various growth factors	250
14.16.1	Carbon Dioxide and Light	250
14.16.2	Water and Carbon Dioxide	250
14.16.3	Temperature and Carbon Dioxide	250
14.16.4	Nutrient Solution and CO ₂	251
15.	Light and Temperature Needed in a Greenhouse	252
15.1	Brief about Lighting	253
15.1.1	Photosynthesis	253
15.1.2	Exposure to the Lights	254
15.2	Brief About Temperature	255
15.2.1	Factors to Consider to maintain the Temperature in the Greenhouse	256
15.3	Where the Grow Lights are used?	261
15.4	Types of Bulbs used in a Greenhouse	261
15.4.1	HID (High-Intensity Discharge)	261

15.4.2	Mercury Vapor lamp	262
15.4.3	MH (Metal Halide)	262
15.4.4	HPS (High-pressure Sodium Light)	263
15.4.5	MH and HPS (“Dual arc”)	264
15.4.6	The LED (Light Emitting Diodes)	265
15.4.7	Incandescent Light	265
15.4.8	Fluorescent Lights	266
15.5	What is Photoperiodism?	267
15.6	What is the Optimum Temperature for Plant Growth?	268
15.7	Brief About Seed Germination	269
15.7.1	Scheduling	270
15.7.2	Plant Quality	270
15.7.3	Cold Temperature	270
15.7.4	Pests Control	271
15.7.5	Planting	271

16. Regulation of Plant Growth 272

16.1	Types of PGRs	273
16.2	Use of Chemical Growth Regulators	273
16.3	Alternative Methods in the Service of Greenhouse Plants	274
16.3.1	Cultivar Selection	274
16.3.2	Intensity of Light	275
16.3.3	Control of Day and Night Temperature	275
16.3.4	Mechanical regulation of Growth	276
16.3.5	Fertilizer Control and Water Stress	277
16.3.6	Light Management Regulation	278
16.4	The Scope for Other Methods	280

17. Management & Maintenance Required By a Greenhouse 281

17.1	Greenhouse Maintenance	282
17.1.1	Cleaning the Greenhouse	282
17.1.2	Getting Rid of Unwanted Pests and Diseases in the Greenhouse	282
17.1.3	Steps for Cleaning the Greenhouse	284
17.2	Greenhouse Management	286

17.2.1	Efficient Energy Consumption and its Conservation in Greenhouse	287
18. Various Greenhouse Crops		293
18.1	Advantage of Greenhouse Crops	294
18.2	Growing Crops all year long	295
18.3	Crops Suitable for each Season	295
18.3.1	Last frost-free day	296
18.3.2	Winter season to Early Spring	296
18.3.3	Mid-Spring	296
18.3.4	Late Spring to Early Summer	297
18.3.5	Summer to Late Summer	297
18.3.6	Autumn Season	297
18.3.7	Winter Season	297
18.4	Profitable crops which can be grown in the Greenhouse	298
18.5	Crop Requirements	313
18.6	Crops Grown Outdoors During Winter	314
18.7	Greenhouse Crops in Canada	319
18.8	Main Crops in the US	320
19. Greenhouse Cropping System		321
19.1	Crop Choice	322
19.2	Organizing the Crops	322
19.3	Soil Management	322
19.4	Crop Rotation	324
19.5	Row Crops	325
19.6	Legumes	325
19.7	Cover Crops	326
19.8	Green Manure	327
19.9	Organic Farming	327
19.10	Multiple Cropping	328
19.11	Soil Erosion	329
19.12	Soil Conservation	329
19.13	Soil Organisms	330
19.14	Soil Organic Matter	331
19.15	Mineralization	331
19.15.1	Nitrogen Fixing	331

19.15.2 Carbon Sequestration	331
19.16 Pest Control	332
19.17 Weed Management	332
19.18 Mulching	334
19.18.1 Mulching Materials	334
19.19 Residue Management	339
19.19.1 Tillage	339
19.19.2 Burning	340
19.19.3 Removal	340
19.20 Water Management	340
19.21 Nutrient Management in the Cropping System	340
19.22 Soil Test	341
19.23 Crop Sequence	341
19.24 Nitrogen Management	341
19.25 Tile Drainage	342
19.26 Carbon Dioxide Enhancement	343
19.27 Irrigation System	343
19.28 Hydroponic Culture System	344
19.29 Continuous Cropping Systems	345
19.30 Potted Plant Cropping System	346
20. Insect, Mite and Disease Management in Greenhouse	347
20.1 Pests in Greenhouses	348
20.1.1 Identification	348
20.1.2 Cleanliness	350
20.2 Prevention of insects and mites	350
20.3 Control methods for insects	351
20.4 Searching for insects or mite pests in the Greenhouse	353
20.5 Point of inspection while searching for insects or mite pests in the Greenhouse	353
20.5.1 Method for the usage of Sticky Cards	353
20.5.2 Plant Parts growing above the Ground and also Underneath Like Roots	356
20.6 Levels or Intensity of Pests	357
20.7 The Technique of Micro screening for the Elimination of insect pests	357
20.8 Organic Prevention of insects and mite pests	358

20.9	Biological control agents available in the market	359
20.10	Other insect and mite control products	361
20.11	Regulators controlling the Growth of insects	361
20.11.1	Microbials	362
20.11.2	Other Materials – Neem as a Pest Control	362
20.11.3	Oils Horticultural	363
20.11.4	Insecticidal Soaps used in Pest Control Management	363
20.11.5	Inhibition of Feeding Patterns of Insects	363
20.12	Traditional methods of insect and Mite Control Products	363
20.12.1	Quantity or Amount	364
20.12.2	Frequency of Application	364
20.12.3	Phytotoxicity	364
21.	How To Maintain Postproduction Quality in Greenhouse	365
21.1	Proper Handling	368
21.2	Pre-Harvest Handling	368
21.2.1	Watering and Sanitation	368
21.2.2	Fertilizing the Plants and Crops	369
21.2.3	Maintaining Plants Nutrition in the Retail Area	369
21.2.4	Nitrogen Deficiency	370
21.2.5	Phosphorus Deficiency	370
21.2.6	pH Problems	371
21.3	Harvesting	372
21.4	Post-harvest Handling	372
21.4.1	Modified Atmosphere Packing	372
21.4.2	Handling of Cut Flowers	373
21.4.3	Packing Shed	374
21.4.3	Preserving the Cut Flower	374
21.4.4	Cold Storage	375
21.5	Pre-shipping handling	376
21.6	Pre-Cooling	376
21.7	Shading	377
21.8	Temperature	377
21.9	Air movement	377
21.10	Ethylene	378

21.11 Factors affecting the Quality of tomatoes during Pre-harvest and Post-harvest	379
21.11.1 Pre-harvest factors affecting the Tomatoes Quality after Harvest	380
21.11.2 Post-harvest factors affecting the Tomatoes Quality after Harvest	382

22. Role of Marketing in Greenhouse Produce **384**

22.1 Greenhouse Crops	385
22.2 Interest in Greenhouse Products	385
22.3 Advantages of the Market Environment	385
22.4 Places of demand for Greenhouse Products	386
22.5 Concept of Sales	387
22.6 Concept of Branding	388
22.7 Marketing Strategies to capture the Vegetable Market	389
22.7.1 Entering the Greenhouse Vegetable Market	390
22.7.2 Area Marketing	390
22.8 Basic outlook of markets	392
22.9 Other Distribution Channels	393
22.10 Product differentiation – a marketing tool	393
22.11 Improved marketing Techniques	394
22.11.1 Selection of Market	394
22.11.2 Marketing Goals Achieved Through Analysis	395
22.11.3 The setting of Business-specific marketing Techniques	395
22.12 Skilled methods for implementing a Marketing Strategy	397
22.13 Evaluation and Control Marketing Strategy	397

23. Greenhouse Business Management **399**

23.1 Overview of the Industry	400
23.1.1 To start the Business	401
23.1.2 Managing the Business	402
23.1.3 Professional Certification	402
23.1.4 Economic Analysis	403
23.1.5 Own the Greenhouse or rent it	403
23.2 Challenges faced in starting the Business	404
28.2.1 Competitors	404

28.2.2	Economic Downturn	404
28.2.3	Legal Method to start a Greenhouse	404
28.2.4	Insurance Policy	405
28.2.5	Trademark	405
28.2.6	Commercial Greenhouse Legal Requirements	406
28.2.7	Financing the Business	406
28.2.8	Location	407
28.2.9	Technical Requirements	408
28.2.10	Creating an Identity	408
28.2.11	Experience	408
28.2.12	Crop Production	409
28.2.13	Expenses	410
23.3	Commercial Business Crops	411
28.3.1	Growing Schedule	412
28.3.2	Commercial Crop Evaluation	413
23.4	Procedures after the Harvest	413
23.4.1	Marketing Plan	414
23.4.2	Market Research	416
23.4.3	Record Maintenance	417
Acronyms and Useful Values		418
