Table of Contents

1 The Internet of Things: An Architectural Perspective about the Future 1

1.1 Introduction 1
1.2 Definition and Function 3
1.3 Opportunities and Motivation 6
1.4 Future Developments 8
1.5 A Multi-Disciplinary Architectural Approach to the future IoT 11
1.6 References 11

2 The Idea of Man: A Cultivated and Instructed Approach to Computing Systems 12

2.1 Introduction 12

2.2 The Idea of Man 13
2.3 Internet of Things and their Relationship to Man 15
2.4 How is Internet of Things different from Artificial Intelligence? 15
2.5 The Role of Artificial Intelligence in Internet of Things 16
2.6 Influence of Philosophy on Computer Science: Is it Possible? 19
2.7 Power Relationship between Human Beings and Computer System 20
2.8 Assemblage of Humans and Machines and their Relationship to Social Interaction 21
2.9 The Programmer's Idea of Man and its Influence on Computing Systems 23
2.10 Methods and Complications in the Implementation of the Idea of Man in System Layout 25
2.11 Conclusion 29
2.12 References 30

3 Creativity and Productivity in Smart Space Through Internet 31

3.1 Introduction 31
3.1.1 Application of Internet to Gain Knowledge 32
3.1.2 Application of Internet to Increase the Scope of Business 32
3.1.3 Application of Internet to Improve Communication 33
3.1.4 Application of intErnet to enable Creativity and Innovation 33
3.1.5 Application of Internet to Improve Registration and Transportation 33
3.2 Concept of DiY as a Network 34
3.2.1 Legal System of Democratic Network 35
3.2.2 Illegal System of Democratic Network 36
3.3 Characteristics of DiY Networking 37
3.3.1 Connecting the Society 37
3.3.2 Informing the Society 37
3.3.3 Teaching and Serving the Society 38
3.3.4 Sharing Personalised Skills Economically 38

3.3.5 Recognition 38
3.3.6 Enabling Creativity of the Society 39
3.4 Applications of DiY 40
3.4.1 Application of DiY in the Practice of Socio-Cultural Activities 40
3.4.2 Implementation of DiY in the Process of Creating Software Applications 43
3.4.3 Application of DiY in the 'Smart Spaces' 47
3.5 Introduction to Creation of Detectable Smart Space 50
3.6 Concept of Creative Participants in Data Transmission Through Interconnected System 52
3.6.1 Participant Enabling Concept I: Call-out IoT 53
3.6.2 Participant Enabling Concept II: Smart Objects IoT 55
3.6.3 Participant Enabling Concept III: Phenomena or Event IoT 57
3.7 References 59

4 End-User Participation and Toolkits 60
4.1 Internet and Internet of Things 60
4.2 Challenges and Obstruction 62
4.3 Inclination towards end-user Participation 63
4.3.1 User-centered Design 63
4.3.2 Participatory Designs 64
4.3.3 End user Programming 65
4.3.4 Crowdsourcing 66
4.3.5 Living Labs 70
4.4 Toolkits Facilitating Innovation 73
4.5 Internet of Things Toolkits 75
4.5.1 Wiring 76
4.5.2 Arduino 77
4.5.3 Lilypad 78
4.6 References 78

5 Internet of Things to Web of Things: Pillars of Computer Architecture 79
5.1 Introduction 79
5.2 Relationship between the IOT and WOT 81

5.3 Formation of Smart things based on RESTful Principles 84
5.3.1 Operation in Uniform Interfaces 88
5.4 Creating Network of Things 90
5.5 Devices which Restrict Web-connections 92
5.6 Architecture of WOT or Web of Things 95
5.7 Modified Version of WOT 99
5.7.1 Real-time WOT 99
5.7.2 Run-time WOT 100
5.8 Conclusion 103
5.9 Reference(s) 104

6 Role of Data Input in the Internet of Things: An Introductory Approach to Cooperating Logistics Processes 105

6.1 Introduction 106
6.2 Relationship between Logistics and the Internet of Things 107
6.3 Uses and Applications of IoT in Logistics 109
6.4 Future of IoT Technology 112
6.5 The Internet of Things: A Syntactic Approach 112
6.6 Self-Governing Cooperating Logistics Processes 116
6.7 Smart Devices of Logistics 117
6.8 Introduction to Computers 118
6.9 Growth of Computers over the Years 119
6.10 An Analysis and Comparison of the Cognitive Abilities of Human Beings and Artificial Intelligence 121
6.11 Conclusion 124
6.12 References: 124

7 Internet of things Resource Management: Synchronisation, Clustering and Software Agents 126

7.1 Introduction 126
7.2 History and Associated Work 127
7.2.1 Clustering 127
7.2.2 Various Agents of Software 129
7.2.3 Synchronisation of the Data 130
7.3 Various Definitions and Assumption 132

7.4 Scalability Clustering 134
7.4.1 Various Principles of Clustering used in the Construction of the IOT 134
7.4.2 Contextual Role 136
7.4.3 Guidelines for Design 137
7.5 Various Software Agents which are used for the Representation of the Objects 142
7.6 Synchronisation of the Data 144
7.6.1 Network Architecture Types 144
7.6.2 Various Challenges Encountered and the Requirements 148
7.7 Conclusion and Summary 150
7.8 References: 151

8 The Contribution of Internet on Increasing the Agility and Autonomy in Collusion Productions 152
8.1 Introduction 152
8.2 Futuristic Challenges faced by the Networked Enterprises 154
8.3 Basic Perceptions about the role of Agility and Autonomy 156
8.3.1 What is Agility? 156
8.3.2 Importance of the Autonomous Control 159
8.4 Role of Internet of things in enabling the Autonomy and Agility 163
8.5 New Techniques which are Introduced to Satisfy the Demands of the Production Logistics 165
8.6 Application Field of IOT 166
8.6.1 The Assembly Technique 167
8.6.2 Setting the Layout of the Tail Light 168
8.6.3 The System Operating the Tail Lights 169
8.6.4 Things Required in Advance for the Technology to be Smooth 170
8.7 Challenges faced in Developing the Internet of Things 172
8.8 Conclusion and Outlook 175
8.9 References: 176

9 Integrated Billing Solutions 177
9.1 Introduction 177
9.2 A Basic Idea about RFID 178
9.2.1 Readers 181
9.2.2 Signaling 181
9.2.3 Bulk Reading 182
9.2.4 Miniaturization 183
9.3 Utility of RFID 183
9.3.1 Commerce 184
9.3.2 Retail 184
9.3.3 Control Accessibility 185
9.3.4 Advertising 185
9.3.5 Promotion Tracking 185
9.3.6 Logistics and Transportation 185
9.3.7 Infrastructure Protection and Management 186
9.3.8 Passport 186
9.3.9 Transportation Payments 187
9.4 RFID in other Sectors 187
9.4.1 Identification of Animal and implantation in Human 187
9.4.2 RFID in Several Institutions 188
9.4.3 Libraries 189
9.4.4 Museums 190
9.4.5 Schools and Universities 190
9.4.6 Sports 191
9.4.7 Complement to Barcode 192
9.4.8 Waste Management 192
9.4.9 Telemetry 193
9.5 Standardization and Regulation 193
9.6 Issues and Concerns 194
9.6.1 Data Flooding 194
9.6.2 Security Concerns 195
9.7 Advantages of RFID along with IoT 195
9.8 References 196

10 Internet of Things: Business Models 197
10.1 Introduction 197

10.2 Business Model and their Innovation 199
10.2.1 What is a Business Model? 199
10.2.2 Innovation of Business Model 202
10.3 Creating the Value in Internet of Things 203
10.3.1 The Laws of Information 203
10.3.2 Internet of Things and Revenue Generation 206
10.4 Business Model Scenes for IoT 209
10.5 References 214

11 The Diy Smart Experience Project 215

11.1 Introduction 215
11.2 Evolution of DIY 216
11.2.1 The Past of DIY 216
11.2.2 The Possible Future of DIY 217
11.3 Why are people building things? 217
11.4 Motivation of people as a driver 217
11.5 People Logics, Distinguishing Motivation Levels 217
11.6 Eco-awareness theme in DiYSE 219
11.6.1 DiY 'Internet of Things' Consumption of Energy 219
11.6.2 Engagement of Eco-aware Application 220
11.6.3 Requirement 220
11.6.4 Technologies and Standards Relevant to DiY Eco-awareness 221
11.7 DiY Service Creation Framework: Middleware and Sensor-actuator Technologies. 222
11.7.1 Device Integration 222
11.7.2 Middleware Technologies Required for DiY IOT 226
11.8 Semantic Interoperability as a Prerequisite for DiY Formation 228
11.8.1 Ontology 228
11.8.2 Methodologies in the Ontology Engineering 229
11.8.3 Implications of Ontology Engineering 230
11.9 The DiYSE service framework 233
11.9.1 Contextualisation Layer 234
11.9.2 Composition and Exposition Layer of Service 235
11.9.3 Execution Layer 236
11.9.4 Creation and Deployment of DiYSE Applications 237

11.10 Smart Spaces Interactions, uses and Creates 238
11.10.1 Environment Configuration and Interaction of Service 238
11.10.2 Approach to Ecological Designing 239
11.10.3 Architectural Support and Interaction Modeling 239
11.10.4 Example Custom Methods for Interaction: Intelligent Devices 240
11.10.5 Protocols of the Multimodel Middleware 242
11.10.6 Decisive Example: Simple Interaction between Smart Space and Multidevice Interfaces 242
11.11 Reference 243

12 Intelligent Cargo 244
12.1 Introduction 244
12.2 Semantic Web Service and its Life Cycle Process 246
12.3 Different Approaches to Semantic Web Service 259
12.3.1 Internet Reasoning Service Approach 259
12.3.2 OWL – S Approach 261
12.3.3 WSMF Approach 262
12.4 Conclusion and Discussion 263
12.5 References 264

13 Applications of IoT - Utilities 265
13.1 Utilities: 265
13.1.1 Smart Metering: 269
13.1.2 Smart Grid: 270
13.1.3 Smart Home: 270
13.1.4 E-mobility: 270
13.2 Internet of Business: 271
13.3 Challenges faced by Utility industry 273
13.4 References 275

14 Applications of IoT – Agriculture 276
14.1 Introduction 276
14.2 How and Where to Start 278
14.3 IoT Applications of IoT and Smart Farming 279
14.3.1 Precision Farming 279
14.3.2 Use of Agricultural Drones 280

14.3.3 Smart Greenhouse Farming 281
14.3.4 Managing the Livestock using Internet of Things 281
14.3.5 Beehive with IoT Connections 282
14.4 IoT in Agriculture: Boon or Bane? 282
14.5 References 285

15 Application of IoT - Transportation 286
15.1 Introduction 286
15.2 Benefits of IoT in the transportation industry 288
15.3 Uses of Iot in Transportation 288
15.4 Barriers in the way of Deploying IoT in the Transportation Sector 289
15.5 IoT: Use cases 290
15.5.1 Connected Cars 290
15.5.2 Connected Highways 293
15.5.3 Connected Fleets 293
15.5.4 Geo-fencing 297
15.6 References 297

16 Applications of IoT – Public Safety 298
16.1 Introduction 298
16.2 Scopes of IOT in the Field of Public Safety 300
16.3 IoT Users 304
16.4 Important Challenges to be Addressed 304
16.5 References 309

Index 310
